## Section 1 – Conflict Minerals Disclosure

### Item 1.01 Conflict Minerals Disclosure and Report

Quanta Services, Inc. (the “Company”) has determined that tin, tantalum, tungsten and/or gold (the “Conflict Minerals”) are used in one or more of the products that it manufactures or contracts to manufacture, where such Conflict Minerals are necessary to the functionality or production of such products. Accordingly, the Company is subject to the reporting requirements under Rule 13p-1 promulgated under the Securities Exchange Act of 1934, as amended. The Company conducted a reasonable country of origin inquiry and, where applicable, undertook additional due diligence on the source and chain of custody of the Conflict Minerals, as required by paragraphs (a) and (c)(1) of Item 1.01 of Form SD.

Based on the results of that inquiry and due diligence, the Company determined that, with respect to certain Conflict Minerals necessary to the functionality or production of its products, such Conflict Minerals did not originate from the Democratic Republic of the Congo or an adjoining country, as defined in paragraph (d)(1) of Item 1.01 of Form SD. For certain other of the Conflict Minerals necessary to the functionality or production of its products, the Company has disclosed, to the extent possible, the processing facilities used to produce such Conflict Minerals, the countries of origin of such Conflict Minerals, and its efforts to determine the mines or locations of origin of such Conflict Minerals.

### Conflict Minerals Disclosure

The Company has prepared a Conflict Minerals Report for the calendar year ended December 31, 2016, which is filed as Exhibit 1.01 to this report. A copy of this Form SD and the Conflict Minerals Report can also be found on our website at [www.quantaservices.com](http://www.quantaservices.com).

### Item 1.02 Exhibit

The Conflict Minerals Report required by Item 1.01 of Form SD is filed herewith as Exhibit 1.01.

## Section 2 – Exhibits

### Item 2.01 Exhibits

The following exhibit is filed as part of this report:

<u>Exhibit No.</u>	<u>Exhibit</u>
1.01	Quanta Services, Inc. Conflict Minerals Report (for the Year Ended December 31, 2016)

---

**SIGNATURES**

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

Dated: May 31, 2017

QUANTA SERVICES, INC.

By: /s/ Derrick A. Jensen

Chief Financial Officer

## Quanta Services, Inc.

### Conflict Minerals Report (for the Year Ended December 31, 2016)

This Conflict Minerals Report for Quanta Services, Inc. (the “Company,” “Quanta,” “we” or “our”) for the calendar year ended December 31, 2016 is filed in compliance with the reporting requirements of Rule 13p-1 promulgated under the Securities Exchange Act of 1934, as amended. Certain terms included in this Conflict Minerals Report are defined within Rule 13p-1 and Release No. 34-67716 issued by the Securities and Exchange Commission (the “SEC”) on August 22, 2012. Therefore, please refer to those sources for such definitions. A copy of this Conflict Minerals Report can be found on our website at [www.quantaservices.com](http://www.quantaservices.com).

#### I. Applicability of Rule 13p-1

For the calendar year ended December 31, 2016, the Company determined that certain of our subsidiaries were subject to Rule 13p-1 as a result of manufacturing or contracting to manufacture products for sale to third parties reasonably believed to contain tin, tantalum, tungsten and/or gold (the “Conflict Minerals”), where such Conflict Minerals are necessary to the functionality or production of such products.

#### II. Reasonable Country of Origin Inquiry

The Company does not source any Conflict Minerals used in the production of its products directly from any smelters or refiners. However, we identified 137 suppliers from whom we may have purchased components containing necessary Conflict Minerals (the “Subject Suppliers”). After identifying this group, we conducted a reasonable country of origin inquiry (“RCOI”) to determine whether any of the Conflict Minerals used in the production of our products originated in the Democratic Republic of the Congo or an adjoining country or whether they came from recycled or scrap sources. The Company and our third party conflict minerals service provider engaged in a systematic outreach to all Subject Suppliers, utilizing the Conflict-Free Sourcing Initiative’s Conflict Minerals Reporting Template (“CMRT”), developed by the Electronic Industry Citizenship Coalition and the Global e-Sustainability Initiative, to request confirmation of the presence of Conflict Minerals in the raw materials or components they supplied to the Company and information regarding the country and facility of origin of any such Conflict Minerals. Specifically, our efforts included sending to each Subject Supplier an initial communication containing the CMRT and providing access to an engagement portal with various educational resources intended to facilitate their understanding of the RCOI process and the CMRT questions. Further, if a Subject Supplier was unable to provide a completed CMRT, other suppliers in the supply chain were engaged in an effort to establish a chain of custody to the smelter or refiner.

After establishing an initial deadline for return of completed CMRTs, we sent several follow-up requests to non-responsive Subject Suppliers. We ultimately received responses from approximately 53% of the Subject Suppliers, 84% of which indicated that one or more Conflict Minerals was necessary to the functionality or production of the products they supplied to the Company. The responses were reviewed for plausibility and consistency, and additional information was requested as needed to clarify any imprecise responses. The smelter and refiner information collected was compared against our service provider’s smelter/refiner database, which contains companies that are known metal processors, companies that are exclusive recyclers, countries of origin for certain mines, and conflict-free certification status for certain smelters and refiners.

Based on the results of our RCOI, we have reason to believe that the Conflict Minerals necessary to one or more of the Company’s products may have originated within the Democratic Republic of the Congo or an adjoining country and are not from recycled or scrap sources. As such, we conducted further due diligence as described below.

#### III. Due Diligence Measures Performed

The Company’s due diligence program was designed based on the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (the “OECD Framework”), an internationally recognized due diligence framework. As an initial step in our program, we established an internal, cross-functional team and internal reporting processes to identify the presence of all Conflict Minerals within Quanta’s products and supply chain and to determine the applicability of Rule 13p-1.

Additionally, as mentioned above, we engaged a third party conflict minerals service provider to identify and assess risk in our supply chain and to compile and review available information on smelters and refiners in our supply chain. We utilized the CMRT as a preliminary means to identify the smelters and refiners in our supply chain. Based on the responses we received from the Subject Suppliers, we determined that approximately 21% of the verified smelters and refiners required further diligence on the source and chain of custody of the Conflict Minerals they processed. This determination was based on responses indicating that a Subject Supplier or its supply chain was known or thought to source Conflict Minerals from the Democratic Republic of the Congo or an adjoining country or that Conflict Minerals were sourced from countries which are not known to have reserves.

After establishing the smelters and refiners in our supply chain, we sought to determine those that are certified as conflict-free. To make this determination we relied on internationally accepted audit standards, including the CFSI Conflict-Free Smelter Program. If a smelter or refiner was not certified by such a standard, we undertook further steps to obtain information about its sourcing practices, including countries of origin and transfer, and to determine whether the smelter or refiner maintains internal due diligence procedures or other processes that track the chain of custody of its minerals. In these respects, we reviewed whether the facility has a documented, effective and communicated conflict-free policy, whether the facility has an accounting system to support a mass balance of materials processed, and whether the facility retains traceability documentation. To obtain this information we made up to three attempts to contact each smelter or refiner and reviewed publicly available information.

On an annual basis, we plan to review the risks identified in our supply chain and respond to such risks as necessary. We also produce this annual Conflict Minerals Report, which describes our supply chain due diligence processes and findings in detail and is filed with the SEC and posted on our website at [www.quantaservices.com](http://www.quantaservices.com).

#### **IV. Independent Private Sector Audit and Risk Mitigation**

In accordance with the guidance provided in the SEC's Statement on the Effect of the Recent Court of Appeals Decision on the Conflict Minerals Rule, issued April 29, 2014, this Conflict Minerals Report was not audited by an independent private sector auditor.

With respect to the products we manufacture or contract to manufacture for sale to third parties that are reasonably believed to contain Conflict Minerals (described in further detail below), we undertake to complete the following steps to mitigate the risk that such Conflict Minerals directly or indirectly finance or benefit armed groups: continue to assess the presence of Conflict Minerals in our supply chain; continue to engage our direct suppliers with annual requests for Conflict Minerals reporting information, targeting a higher response rate; and if ultimately required, conduct an audit of our Conflict Minerals due diligence measures to determine whether they conform, in all material respects, to the criteria set forth in the OECD Framework.

#### **V. Results of Due Diligence Performed and Product Description**

After completion of our due diligence process for the calendar year ended December 31, 2016, we determined that certain of our necessary Conflict Minerals did not originate in the Democratic Republic of the Congo or an adjoining country, or originated from recycled or scrap sources. However, we were unable to obtain sufficient information to fully identify all the processing facilities utilized to produce our necessary Conflict Minerals or all the countries of origin of our necessary Conflict Minerals.

The products we manufacture or contract to manufacture for sale to third parties that are reasonably believed to contain Conflict Minerals include certain pipeline and downhole inspection tools and certain protection and control panels for use in electrical substations. The Conflict Minerals are predominantly utilized in electrical components within these products (e.g., integrated circuits, resistors, printed circuit boards and electrical connectors). Our efforts to determine the mine or location of origin of the necessary Conflict Minerals with the greatest possible specificity are set forth above under Due Diligence Measures Performed. Set forth below are the processing facilities and countries of origin that the Company has been able to confirm based on the information provided by our Subject Suppliers and our subsequent due diligence.

Because Quanta is a downstream user of Conflict Minerals, we must rely on the representations and information provided by our Subject Suppliers and other third parties within our supply chain. As a result, incomplete or inaccurate information provided by the Subject Suppliers or by a smelter or refiner could affect the accuracy or completeness of the information set forth below or other information contained in this Conflict Minerals Report.
